

Your Future, Uninterrupted

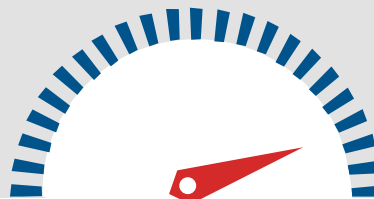

Apparity's EUC management solution enables full control of your critical EUCs, reducing risk and errors while saving time and effort.

EUC Risks & Consequences

EUCs like spreadsheets and databases are flexible, easy to use, and enable critical processes. However, their ease of use also makes them error prone and challenging to maintain, increasing risk within companies. Whether supporting financial reporting, investment decisions, or actuarial processes, EUC governance is a must for all organizations.

THE RISKS

HIGH

For example, even the smallest of changes to a key spreadsheet can have lasting impacts that often go unnoticed until it's too late, resulting in material misstatements, fines, material weaknesses, and loss of investor confidence. As regulators demand increased control, manual solutions are no longer the answer.

Fidelity

A missing negative sign caused a dividend estimate to be off by **\$2.6B**.

Investment Managers

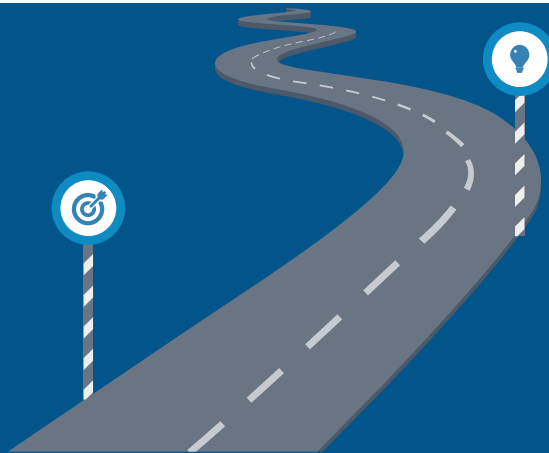

Fined **£150M** for covering up a spreadsheet error.

BARCLAYS

Unintentionally bought **179 unwanted contracts** from Lehman Brothers because of hidden cells.

WHAT WE DO

Apparity is a fully integrated software that enables companies to identify, assess and control the risk that their critical EUCs bring to the business.

EUC risk is safely managed while ensuring their end users maintain focus on driving the business forward.

Solutions Overview

Apparity's integrated modules enable comprehensive management of all spreadsheets and other end user computing applications used in critical company processes.

Steps

1

Discover and Risk Assess EUCs

- Identify all spreadsheets and EUCs in your environment
- Assess each file to determine complexity, risk, and involvement in critical company processes (e.g., Sarbanes-Oxley)

2

Register into Critical EUC Inventory

- Build a centralized inventory of critical EUCs, providing full visibility and auditability
- Determine EUC control requirements through configurable questionnaires

3

Manage Critical EUCs and Apply Robust Controls

- Apply file-level access, version, and change management controls to spreadsheets that support critical processes
- Determine spreadsheet integrity to support best practices and identify & fix potential errors

Why Apparity?
