

ANY SOURCE TO ANY DATABASE IN A FEW CLICKS

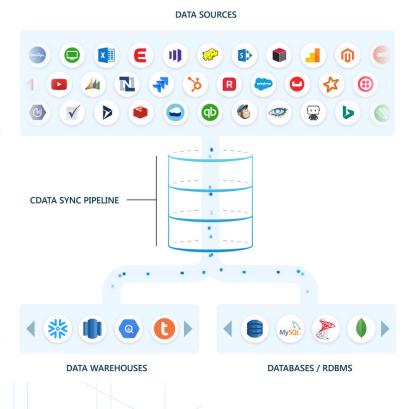

Universal Data Replication Pipeline

Easily create and maintain a replica of your business data in any database or warehouse to make it easily accessible from standard database tooling, software drivers, and analytics.

Create ETL-based data pipelines to facilitate operational reporting, connect data to machine learning and analytics, archive data for disaster recovery, and much more.

Any source, to any database or warehouse:

- ✓ Automated continuous data replication.
- ✓ From: 150+ Enterprise Data Sources.
- ✓ To: SQL Server, Redshift, S3, Snowflake, etc.
- ✓ On-Premise, or on the Cloud.

www.cdata.com/sync/

Sync to Any Database

Supports popular databases like SQL Server, MySQL, DB2, Mongo, Cassandra, Flat Files, etc.

Incremental Replication

Intelligent updates extract data iteratively, minimizing the impact on operational systems.

Point & Click Config

Simple administration with straightforward scheduling, configuration, and flexible mapping.

Secure Backup

Automated backups ensure that critical data is stored safely on the on-premise or cloud database of choice.

CData Software - Leading Provider of Data Access and Connectivity Solutions

Our mission is to simplify the way that users and applications connect with data. We offer a straightforward approach to integration, with easy-to-use data providers, drivers, and tools available from any technology capable of interacting with a database.

Our universally accessible drivers provide access to data through established data standards and application platforms such as ODBC, JDBC, ADO.NET, OData, SSIS, BizTalk, Excel, etc. This approach allows businesses to realize the tremendous benefits and costs savings of integration while reducing complexity and expense.
