currencies

Manage Price Elasticity at Scale

- Revise your pricing strategy to align with the value your product delivers — iterate on price points, create new price tiers, or switch to a different pricing model.

- De-couple pricing and product — roll out pricing changes in hours instead of weeks without changing code.

- Insulate your existing customers from billing shocks — simply grandfather them into your new pricing plans.

Fuel Growth with Diverse Pricing Controls

- Empower your sales team to override prices with custom quotes.

- Create coupon codes to let your sales team run promotional campaigns with ease.

- Set up pricing plans in multiple currencies and widen your reach to new markets.

- Roll out a trial plan to drive top of the funnel growth.

Validate Pricing Decisions with Analytics

- Compare the performance of your pricing plans before and after revising price points using the New MRR by Plan report.

- Monitor the Upgrade MRR trend to make sure you're providing sufficient value across your pricing tiers.

- Check if freemium is a good acquisition channel for your business by analysing your Free-to-paid MRR.
