

What sets Exago apart?

Our focus is exclusively on application software and service providers who operate in a multi-tenant environment. So, rather than developing a one-size-fits-all solution, Exago has been expressly designed to be embedded into your application and tailored to meet your unique requirements

100% Web-based

- Web-based authoring, delivery and consumption of reports
- No downloads or plugins are required for full functionality

A unique blend of ad hoc reporting and BI

- The Exago solution combines full-featured operational ad hoc reporting with interactive visualizations and dashboards
- Other solutions are weaker on operational ad hoc reporting

A true self-service solution

- No developer involvement is required in the reporting life cycle; non-technical business users can create their own base reports, visualizations, maps and dashboards

Designed for the widest spectrum of end users

- Exago can be easily tailored, both in functionality and data access, to provide an environment that's suited to the level of technical expertise of each individual end user
- Four separate report designers can be enabled in any combination for each user
- Advanced features can be hidden from basic users, while power users can be given access to all of the functionality they require

Powerful integration and extensibility features

- Single sign-on
- Flexible security
- Completely customizable UI
- Complex server events model, custom functions and custom data objects
