

Product Overview

INTRODUCTION

LogDNA is a centralized log management solution that empowers DevOps teams with the tools that they need to develop and debug their applications with ease. LogDNA's innovative features put users in control of their data, allowing them to gain valuable insights from their logs. Benefits of using LogDNA:

- + Fully centralized log management platform
- + Modern & intuitive with natural language query
- + Compliant & secure: PCI, SOC 2, CCPA, HIPAA, US-EU Privacy Shield, GDPR
- + Supports multiple integrations and ingestion sources
- + Optimized for container-based applications
- + Pay-per-GB pricing

TECHNOLOGY

LOGDNA FEATURES

Troubleshooting

LogDNA allows users to pinpoint production issues with natural-language Search and use Boards and Graphs to visualize their data to identify abnormalities.

Monitoring

LogDNA enables DevOps teams to easily centralize their logs from multiple sources and receive real-time alerts on Slack, PagerDuty, email and more.

Debugging

LogDNA's intuitive UI allows developers to easily integrate logging into their workflows so that they can develop and debug their applications in real time.

LogDNA automatically parses logs, making them easy to search with a simple query language.

Business analytics

Data visualization like LogDNA Screens, Boards, and Graphs help users understand the overall health of their systems and identify business trends and anomalies. If they see an unexpected spike in data they can easily drill down into their logs to understand what happened and adjust quickly to accommodate it.

Fully compliant & secure

LogDNA is compliant with PCI, SOC 2, GDPR, Privacy Shield, and CCPA and offers a HIPAA compliant plan.

Custom features like RBAC and SAML help teams control who has access to their logs.

When a security event is detected, SOC teams can be alerted by LogDNA in real time so that they can address them quickly and minimize the security impact.
