ALWAYS THERE.

Protect SaaS Application Data From Loss

Your responsibility to protect your organization's data does not change when you adopt SaaS solutions. To ensure availability, performance, and meet compliance requirements you need to protect your SaaS application data from loss due to ransomware, malware, user mistakes, malicious behavior, and sync or configuration errors.

Spanning is the leader in Cloud-to-Cloud SaaS Backup, proven and trusted by more than 10,000 organizations to provide enterprise-class data protection. Cloud-native, purpose-built solutions for Office 365, G Suite and Salesforce provide powerful yet easy-to-use capabilities to protect your organization's critical data.

As native cloud technology, Spanning is fast and easy to install and requires no hardware, installed software, network bandwidth, data center space, management or maintenance and leverages more secure application-level authorization instead of service accounts and passwords. The power of the cloud combined with reduced IT administration and help desk costs plus simple and transparent pricing results in the lowest total cost of ownership of any backup and recovery solution in its class.

Industry-Leading Cloud Data Protection

Built in the cloud for the cloud, Spanning Backup is proven technology delivering the most trusted, reliable backup and recovery for SaaS applications. Our powerful and easy-to-use solutions:

- **Provide peace of mind** with a second copy of your data that is automatically backed up and validated so you can be confident in its integrity.

- **Improve security and compliance** with a solution leveraging more secure, application level application access that meets all major security and privacy regulations.

- **Maximize business continuity** with fast search and point-in- time recovery of email, files, folders, accounts, metadata, attachments and customizations.

- **Reduce costs** with no infrastructure requirements, minimized IT administration and help-desk time and simple, transparent pricing.

- **Provide advanced administration tools** with complete status monitoring, actionable error reporting, and powerful data management functionality.

## Backup Is One Thing. Restore Is Everything.

Spanning is unique in its ability to enable end-users as well as administrators to quickly find and restore data to its original state in just a few clicks. Spanning provides powerful administrator tools designed with an interface so intuitive you can extend restoration to end-users for their own data. Our user-friendly search and restore capabilities significantly reduce help-desk tickets and time spent on recovery issues, boosting productivity and minimizing business interruption.
