## Successful Integrations & Migrations Start Here

Welcome to Starfish, a dynamic iPaaS for migrating and integrating your systems. Since 2007, our mission to make data projects less complicated and more personalized has encouraged businesses of all sizes to transform their relationship with their data and empower their initiatives through technology.

Starfish can easily accommodate data projects of every size and complexity. Unlike competitor products with high price tags and low configurability, Starfish puts power in the hands of the user, helping development teams create precise solutions and giving citizen developers easy-to-use tools that won't hinder their creativity.

### The Starfish Solutions Suite

Starfish delivers a complete suite of data management tools to match any project.

#### Starfish iPaaS

The integration platform as a service (iPaaS) is a powerful low-code solution with dynamic DevOps capabilities to support data projects of varying complexity. Easy point-and-click mapping satisfies a majority of your data project needs with coding engines that enable you to transform your data and perform complex workflows.

#### Starfish Cloud Migration Wizard

The Migration Wizard is a DIY tool offering pre-built migrations that allow teams to move crucial data quickly in an easy-to-follow wizard. The flexible framework gives access to custom fields, so no data is ever left behind.

#### Starfish Cloud Designer

The Starfish Cloud Designer is a browser-based user interface that enables you to utilize all the tools Starfish encompasses in an intuitive, organized framework. It gives access to the full set of iPaaS tools for complex migrations and integrations, enabling users to manipulate their data by creating custom relationships and building out their ideal project specs.

#### Starfish Essentials

The Essentials Suite is a collection of pre-built integrations that are quick to deploy while still being flexible enough to personalize. Use the pre-built maps to connect your crucial data, then take your integration to the next level by adding custom fields and functions.

#### Starfish Stitching Engine

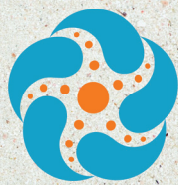

Starfish's Stitching Engine uses Artificial Intelligence to detect software and build integrations based on heuristics. This allows for the rapid development of new integration solutions and streamlined architectures.

#### Starfish Ray

With the Starfish Ray, locally installed applications and databases - along with cloud-based solutions - can be easily connected. Bring the power and benefits of an iPaaS into your local environment and enable bi-directional, secure SSL encrypted communication to create one cohesive system.

## Secure & Compliant

GDPR Compliance

HTTPS Encryption

Encrypted SQL Database

Threat Detection

## Dynamic DevOps

Starfish is a low code solution which also supports major scripting languages C#, vbScript, JavaScript, and Python. Develop your own connectors using the SDK. Build your own custom solutions on a fully developed iPaaS that includes integration & scripting engines, notifications, logging, and a visual designer.
