thinQ
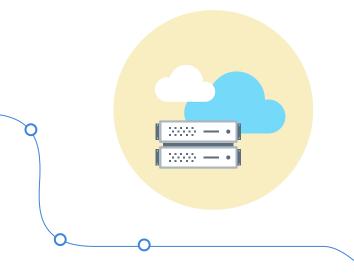

Cloud-Based Origination

Control Your Carriers, Numbers, and Pricing for Inbound Voice

FINALLY AN ORIGINATION SOLUTION WITH OPTIONS

thinQ's revolutionary cloud-based service is designed for carriers and offers ordering access through a complete API or our easy-to-use portal. Its easy-to-use portal enables click routing controls and flexible Port-In capabilities.

HOW MUCH CONTROL DO YOU WANT?

All of the control is extended to our customers. In real time, you can:

- Choose from multiple vendors
- Select single numbers or similarly grouped numbers
- Access infrastructure and tools
- Make routing preferences that fit your needs

DISCOVER THE DIFFERENCE

Relying on a single provider for your origination needs can lead to limited number availability, ordering delays, provisioning issues, or burdensome expenses.

Don't get stuck with limited options and leave your customers wishing they had chosen another carrier. Take back control and give them the quality they deserve with:

- Crisp and clear audio
- Better call completion
- Redundancy and continuity
- Total operational control
- Cost containment and savings
- A world-class user portal

THERE'S A BETTER WAY: THINQ ORIGINATION

The thinQ cloud-based Origination platform offers total control throughout the ordering and provisioning process and makes it easy to meet independent carrier and VoIP provider requirements.
